

Appendix B

Table of Metrics

Table of Metrics

Factors examined in CARB's statewide assessment include communities designated as a disadvantaged community, exposures to air pollution, extent of sensitive populations, and other measures of vulnerability to air pollution. Disadvantaged communities are identified by the California Environmental Protection Agency pursuant to Senate Bill 535.¹

Figure B-1 identifies all the communities included in the statewide assessment: those that were nominated by communities, air district recommendations, and/or SB 535 disadvantaged communities. It is staff's intent that the communities included in Figure B-1 will either be selected by the CARB Governing Board for inclusion in the Program or will remain as a candidate for future year consideration. Annually, these candidate communities will be reevaluated along with any new communities identified through community nominations, air district recommendations, or the statewide assessment process.

Quantitative factors for the statewide assessment are drawn from multiple data sources including data layers available within CalEnviroScreen 3.0 (CES 3.0), the California Healthy Places Index (CA Healthy Places Index), CARB's Pollution Mapping Tool, CARB's emissions inventory, and CARB's Environmental Justice Screening Method, which includes information on sensitive receptors, hazard proximity, and additional socioeconomic and health indicators, see Table B-1.

CARB staff also worked with air districts to assess the cumulative air pollution exposure burden in each community taking into consideration air pollution and related factors. CARB developed and posted on the Program website², a table of metrics summarizing the data used for this assessment in June 2018. The table of metrics shows data for the factors and considerations described above by city or area and identifies the corresponding nominated community included in that city or area. Figure B-2 provides a graphical illustration of how the table of metrics is created from census tract level data. Essentially, the table of metrics presents maximum census tract values from census tract data falling within an approximate city boundary. This table has been updated since the initial June 2018 version to address comments and include additional community nominations and air district final recommendations (Table B-2).

Table B-1 Table of Metrics Field Guide

Field		Derivation
City/Area		<p>City/Area is derived from the "Approx. City" in CalEnviroScreen (CES) 3.0 census tract data. Each City/Area in the table is made up of the geographic area of all the census tracts that share an "Approx. City" label. All statistics were gathered during the aggregation of the census tracts to their respective "Approx. City".</p> <p>Caveats : Aggregating census tracts based on "Approx. City" can lead to multiple cities falling into the same community. For example, both "Bell" and "Bell Gardens" fall into the "Approx. City" of "Bell". Large Approximate Cities such as Los Angeles and San Jose tend to absorb many of the smaller communities around them. It cannot be expected that every city in California is represented.</p>
Air District		Air District the majority of the City/Area falls in geographically.
Region		Designates one of the five regions the community is located in: Bay Area, San Joaquin Valley, South Coast, Border region (which includes a portion of San Diego and Imperial air districts) and all other areas of the State.
Contains SB 535 DAC List CES3.0		Identifies if City/Area is a SB 535 disadvantaged community. Pulled from CES 3.0.
CES 3.0 Score (percentile)		The highest over all CES 3.0 score of a census tract of all aggregated census tracts with the City/Area boundary.
CA Health Place Index (percentile)		The highest overall CA Healthy Places Index of a census tract of all aggregated census tracts with the City/Area boundary. Pulled from CA Healthy Places, April 2018 version.
EJSM Score (percentile)		The highest overall Environmental Justice Screening Method (EJSM) score of a census tract of all aggregated census tracts with the City/Area boundary. Estimated from EJSM 2016 score.
Population	Total population	Sum of the population field of each census tract within the City/Area.
	Density (pop. per square miles)	Population divided by square miles of City/Area area.
Air pollution indicators	PM2.5 (percentile)	The highest CES 3.0 score in a census tract of all aggregated census tracts with the City/Area boundary.
	Diesel PM (percentile)	
	Ozone (percentile)	
	Toxic release(percentile)	
	Traffic (percentile)	
Emission sources	Mobile	The highest ranking percentile in a census tract of all aggregated census tracts with the City/Area boundary based on 1km gridded inventory data (CARB's air quality modeling gridded inventory v1.5, base year 2012).
	Stationary	
	Area-wide	
	Large stationary source(count)	Count of the large stationary sources within the City/Area boundary. Sourced from CARB's pollution mapping tool.
Sensitive receptors	Schools	Count of the public and private schools within the City/Area boundary. Sourced from EJSM 2016 data.
	Day cares	Count of the day cares within the City/Area boundary. Sourced from EJSM 2016 data.
	Hospitals	Number of major health care facilities source within City/Area boundary, sourced from CDPH.
Public health indicators	Asthma (percentile)	The highest CES3.0 score in a census tract of all aggregated census tracts with the City/Area boundary.
	Low birth weight (percentile)	
	Cardiovascular disease (percentile)	
Socio-economic	Poverty (percentile)	
	Unemployment (percentile)
