

Appendix C

Municipal Solid Waste Landfills Affected by the Emission Guidelines

Appendix C containing a database of 194 landfills that are subject to the Guidelines and have accepted waste since 1987 is located at:

<https://www.arb.ca.gov/cc/landfills/landfills.htm> under the “*California’s State Plan*” section. Of these, there are 105 landfills that need controls per 111(d). There are an additional 30 landfills that have controls per ARB’s LMR requirements but are not subject to the Guidelines. Emissions for each affected landfill were generated using the IPCC First-order Decay model. Landfills with emission controls were given an 80 percent control factor if they were subject to and in compliance with the LMR. Conversely, landfills with controls not subject to the LMR (controls were installed for gas migration or other issues) were given a default control factor of 75 percent based on U.S. EPA studies. Landfills without control information that are not subject to LMR, or subject to controls under Cc or Cf, were assumed to be uncontrolled.
