

# **Imports/Exports**

2007 EMA Certification Workshop

April 24, 2007

# Imports Forms

- Form 3520-21 is updated/reviewed as regulations change
- Last update 4/06
- Plan to update form this year to include recent changes
  - Stationary engines
  - Nonroad SI regulations
- ASD will lead process with input from CISD and OECA. Manufacturers will be consulted.

# Import - Customs

Engine means a complete or partially complete internal combustion engine. The term engine broadly includes any assembly of an engine block and at least one other attached component. The term engine does not include engine blocks with no attached components, nor does it include any assembly of engine components that does not include the engine block. This includes complete and partially complete engines as follows:

- (1) A complete engine is a fully assembled engine in its final configuration.
- (2) A partially complete engine is an engine that is not fully assembled or is not in its final configuration. Except where we specify otherwise in this part or the standard-setting part, partially complete engines are subject to the same standards and requirements as complete engines. The following would be considered examples of partially complete engines:
  - (i) An engine that is missing only an aftertreatment component.
  - (ii) An engine that was originally assembled as a motor-vehicle engine that will be recalibrated for use as a nonroad engine.
  - (iii) An engine that was originally assembled as a land-based engine that will be modified for use as a marine propulsion engine.
  - (iv) A short block consisting of engine components connected to the engine block, but missing the head assembly.
  - (v) A loose engine that will be installed in an off-highway motorcycle that will be subject to vehicle-based standards.

# Export Declarations

- No plans to update CD 95-03-HD
- Declarations can be issued to engines not previously certified
  - Encourage manufacturers to use approved AECDs
  - We do not have resources to complete AECD reviews for engines that will not be certified in the US
- Declarations for Consent Decree engines will note that engines comply with CD
- No formal declaration program exists for other industries, highway procedure would be followed

# US Territories

- 40 CFR 86.007-11(f):

Model year 2007 and later diesel-fueled heavy-duty engines and vehicles for sale in Guam, American Samoa, or the Commonwealth of the Northern Mariana Islands shall be subject to the same standards and requirements as apply to 2006 model year diesel heavy-duty engines and vehicles, but only if the vehicle or engine bears a permanently affixed label
